

COLORS

Color Options

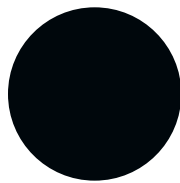

Tecnoglass lead-free ceramic frit paints are perfect for your building's glass needs due to their consistent color, durability, cost effectiveness, and they're environmentally friendly. We also offer translucent and opaque (when viewed in reflection with an opaque uniform background) ceramic frit color options for silk-screening.

Key Benefits

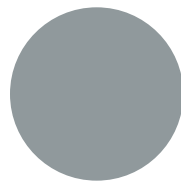

- True lightfastness ensures that there is no visible difference between old glass and new glass, older installations and newer, original parts and replacements.
- Ceramic Enamels are hard, as hard as the glass itself. They won't scratch, crack, fade, discolor or mar during fabrication or installation.
- Every color is "green." Fired-on Ceramic Enamels are non-toxic, non-combustible, and easy to dispose.
